

(a) Periodic load + rare fault

periodic baseline

rare fault pattern

+

=

observed = baseline + event

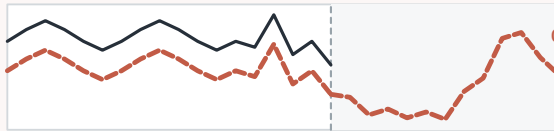

history

future

rare event is added on top of periodic load

(b) Direct retrieval

Prior outage: same flickers, lower load

copy future

Copied recovery has the wrong level

(c) Residual retrieval

1 Match prior outage

2 Extract actual - forecast

3 Add error

Corrected = today's baseline + stored error
