

1 (a) Match observed context

Descriptor search finds close historical shapes

— query - - - neighbor 1 - - - neighbor 2

Similarity identifies candidates;
it does not prove their futures.

2 (b) Retrieve model errors

Raw analog futures mix level and dynamics

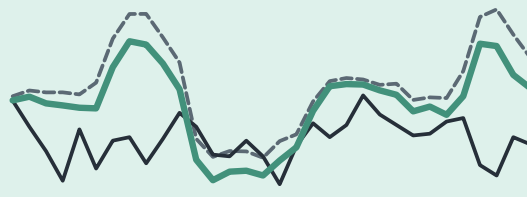

Residuals expose model-specific error

green: applied residual correction

3 (c) Correct conservatively

Add the agreed error pattern to the base forecast

- - - base — corrected — truth

reliable residual: add correction
disagreement: shrink toward
the identity forecast
