

1. VALIDATION: BUILD MEMORY AND LOCK ONE POLICY

Earlier stadium event

history forecast / actual

Missed departure surge

Error memory

store only after the surge is observed

Candidate policies

Locked policy

residual retrieval
chosen before test

2. FORECASTING: APPLY THE LOCKED POLICY

Today: event ends

Describe event state

Retrieve missed surges

Combine agreeing errors

Add missed surge

Corrected matches actual

If identity wins: keep the model forecast

THE BACKBONE IS NEVER UPDATED; THE LOCKED POLICY ONLY ADDS A CORRECTION
